Best Practices, Conclusion…

BEFORE an Incident (1/2)

- Have a good security policy
- Learn thy system(s)
- Turn on logging & accounting
- Create a Baseline
- Regularly audit your systems

BEFORE… (2/2)

- Learn how miscreants abuse systems
- At least know how to gather forensic data
- Backups
- Know your neighbors
- Know who to contact in emergency

Security Policy

- The most important thing
- Well documented, consistent systems
- Keep up to date with security patches, tools, and education

The Coroner's Toolkit

- Barebones
- UNIX
- Simple freezing routines
- MACtime, unrm/laz, icat/pcat, timeline tools, etc.
- Precursor to Time Machine?

Abuse

- With knowledge comes responsibility
- Spying & abuse are easier than ever
- Arms race
